

Still using Windows?
Stop being  and use
Justin Bieber Linux!

```
robert@computer:$ cat gnu_linux.txt | fmt
I'd just like to interject for a moment.
What you're referring to as Linux, is in fact,
GNU/Linux, or as I've recently taken to calling
it, GNU plus Linux. Linux is not an operating
system unto itself, but rather another free component
of a fully functioning GNU system made useful
by the GNU corelibs, shell utilities and vital
system components comprising a full OS as defined
by POSIX.
```

```
Many computer users run a modified version of
the GNU system every day, without realizing it.
Through a peculiar turn of events, the version of
GNU which is widely used today is often called
"Linux", and many of its users are not aware
that it is basically the GNU system, developed
by the GNU Project.
```

```
There really is a Linux, and these people are
using it, but it is just a part of the
system they use. Linux is the kernel: the
program in the system that allocates the machine's
resources to the other programs that you run.
The kernel is an essential part of an operating
system, but useless by itself; it can only
function in the context of a complete operating
system. Linux is normally used in combination
with the GNU operating system: the whole system
is basically GNU with Linux added, or GNU/Linux.
All the so-called "Linux" distributions are really
distributions of GNU/Linux.
```

GNU/Linux

"Most good programmers do programming not because they expect to get paid or get adulation by the public, but because it is fun to program."

Linus Torvalds

- Programming Languages
- Operating Systems
 - Including Linux, Android and the Bulk of Apple's various OS (BSD)
- Messaging Apps
- Web Browsers
 - Netscape (war w Microsoft), Mozilla (Firefox etc), Brave, Zen...
- So much more but rushing to do this, but legit everything
 - Is one of the arguments Zezik uses for why capitalism doesn't breed innovation, they just steal is from the open source world.

OMNIXY - DHH's Omarchy rewritten in Nix!

I saw the [freship video](#) on [Omarchy](#), and it gave me so much excitement. I don't like many of the design decisions, but it is really useful for converting users. There is only one issue, as I am sure many of you did, I left Arch about a year ago now and don't want to go back. A project whose aim is to convert users to the coolest parts of Linux should be written in Nix!

I made this forked the [repo](#) after watching [DHH's Guide Video](#). Claude Code and I are working on rewriting the repo rn. I will be changing some of the design decisions as go along, but not many. As of writing I have just pushed a first rewrite that I have not tested but will have more by the end of the day. I am still really new to Nix, so would love help and feedback.

Sidenote on that: My intention for this is not to make the best nix distro, but just one that works out of the box and can convert new users.
